

Clintracc – An Overview

Clintracc is a powerful yet flexible Study Management System that incorporates the following functionalities:

- Biometric based Volunteer registration and identification
- Study and parameter management
- Dosage & Vacutainer management
- Volunteer Transfer management.

Clintracc is designed and developed to address the following challenges specific to Bio-Equivalence or Bio-Availability studies:

- 1) Biometric (Finger and Vein) based identification procedure to avoid volunteers participating in multiple studies simultaneously.
- 2) Timely reporting of adverse events.
- 3) Volunteer transfer management between studies.
- 4) Efficient subject dosage management to maintain the integrity of the samples.

Key Features of Clintracc

Role Based Access Control: Multi-level security and authentication; granular role-based control.

Integrated Reporting: Generation of custom and ad-hoc reports.

Search: Powerful Search Mechanism – Keyword, Search by Fingerprint and Advanced Search.

Previous Study Participation History and Audit Trails.

Integration: Integrates with existing products or workflow.

The logo for VIMS (Vimta Systems) is located in the bottom right corner. It consists of the letters 'VIMS' in a bold, italicized, red sans-serif font.
